

Conclusion

This paper takes Kenya as the research object and aims to explore the feasibility of ICT education in southern hemisphere countries similar to Kenya. The study found that countries in the southern hemisphere, similar to Kenya, generally faced three problems in carrying out the project: Financial difficulties, poor infrastructure, and privacy issues. This paper provides corresponding solutions to these three problems. Research has found that students can pay their tuition fees through government and corporate funding and pay back their original tuition loans on their wages once they find a job. Students can also learn through online education, and in extreme cases, schools will provide CDs and DVDs to ensure that students can keep up. At the same time, privacy courses are equally important, and schools need to make students aware of the specific definition of privacy and its boundaries. Based on research and related data, this paper reasonably expounds on the feasibility of ICT project: Financial difficulties, poor infrastructure, and privacy issues. This paper provides corresponding solutions to these three problems. Research has found that students can pay their tuition fees through government and corporate funding and pay back their original tuition loans on their wages once they find a job. Students can also learn through online education, and in extreme cases, schools will provide CDs and DVDs to ensure that students can keep up. At the same time, privacy courses are equally important, and schools need to make students aware of the specific definition of privacy and its boundaries. Based on research and related data, this paper reasonably expounds on the feasibility of ICT education in countries in the southern hemisphere, aiming to provide help and guidance to target countries and related institutions on this project.
